Single Chamber Tea Bag Machine

STB-12H

Single Chamber Tea Bag Packing Machine STB-12H Details

Technical Features

STB-12H tea bag machine is our newly designed packing machine for the single chamber tea bag packaging. Like STB-15, STB-12H is a high-speed tea bag machine too. STB-12H automatically makes filter sachets with a speed of 240 pcs/min. It's a super-fast tea bag filling and sealing machine.

STB-12H makes filter sachets which are single chamber tea bags with string and tags. However, unlike normal single chamber teabag, STB-12H makes a completely new type of single sachet tea bag.

Expanded Function

There's a very good function of STB-12H you will like. It's the same function as the DC-10 double chamber tea bag machine. It's the automatically counting filter tea bags and grouping them before they are manually put into the box.

However, since that STB-12H has double filling & packaging systems, it has a movable device to collect the counted teabags. It's really super-fast filter tea bags counting and grouping device.

Technical Parameters

Modal	STB-12H
